**Power your production - reduce operation cost  
achieve higher profit**

Printing environments have evolved and so have the corresponding demands. Large format printing has turned mainstream. Multi-printer environments are the norm. New media and formats are being introduced. However without a strong workflow the expected results and profit margins cannot be achieved.

Concepts such as automated print settings, mixed print jobs, remote configuration and file submission, colour consistency, cost-efficiency and controlling is the new reality in digital printing.

Operators must work more effectively. Production time and cost must be reduced as customer require prints faster and higher quality. Therefore, the benefits of a strong workflow are clear and imperative for every type of printing facility:

reprocontrol.net is developed with an eye into the future. Whether you operate on Graphics or CAD, run an in-house printing facility or a digital reprographic studio with decentralised printer pools, reprocontrol.net is designed to address the growing challenge for an optimised workflow.

January 09

reprocontrol.net is a dynamic workflow-management solution that does not remain passive but adjusts to the rapidly-changing complex array of printing needs.

How would you set your production for the future? Simply, enter into a whole new world of digital printing with reprocontrol.net!

- ▣ Connect all your LED, inkjet and small-format printers as well as scanners together into a single workflow and maximize your production throughput
- ▣ Achieve beyond precise colour conversion with colour management in L\*a\*b\* colour space and full support of sRGB, CMYK and HKS colours
- ▣ Be in absolute control of your production costs with the integrated Costtracker
- ▣ Manage your operators more productively than ever before with the system's highly adaptive user administration
- ▣ Gain non-stop performance with the unattended batch / overnight printing function
- ▣ Client/server mode allowing connectivity for productivity without limits
- ▣ Optimize your business potential straight away with the browser-client that requires no additional software to be installed
- ▣ Bring maximum flexibility to your environment through the software's open interface and connect to operating external applications
- ▣ Keep on expanding with the system's ability to allow new features and additional hardware in the future

Print management to meet every ambition.  
Simply, invest in the future!
